

## **6' HD HYDRAULIC RAMP GATE**

### **DETAILED OVERVIEW & OPERATING INSTRUCTIONS**

This option combines a spreader gate and loading ramp into one integrated package. Both of these features are powered by a 3" x 20" hydraulic cylinder to give you full hydraulic power, no more hassle with the traditional slide-in ramps, just adjust the latch in the back for the spreader gate or ramp than hit a button on the remote for easy dumping and/or loading. The length of the ramp provides less steep incline and lower approach angle to assist in loading, cleats have been added to improve traction when loading equipment, a three way valve was also installed in the front toolbox to easily change power between dumping and loading.
